Walter A. Studley, Nursery

We consider 0-2 and 0-3 inch seedlings too small for field planting, and we think that they should be lined out where they can be watered, shaded and weeded for about two years. They are small due to over crowding in the seed bed but have good root systems and grow well when transplanted and given room.

#### EXPLANATION OF PRICE LIST:

"S" indicates seedlings

"T" indicates transplants

"T close" indicates close transplants (that is the result of small 2yr seedlings that have been root pruned and transplanted close together and have grown there for two years)

"T 6x6" indicates 6x6" transplants (that is the result of average sized 2yr seedlings, root pruned and transplanted 6 by 6 inches apart and have grown there for two years) (These are well branched)

"(2-2)" the first number indicates the number of years in the seed bed the second number indicates the number of years in the transplant bed.
